Sliding Door Automation Now Possible With Doors In Motion

Newest Integrated Partner Has Seamless Connection Point to Crestron Systems

Crestron today announced their first Integrated Partner with the capability to automate large sliding doors with the touch of a button.

Doors In Motion makes the task of opening multi-slide doors and windows effortless. Their patented system is designed to work with virtually all types of aluminum or wood panels. With automated sliding doors, homeowners can take advantage of their stunning views and incredible weather with no obstruction from door panels.

Every *Doors In Motion* system is designed to easily integrate with Crestron's automation control equipment. Whether automating a small bi-part door in a condominium or a more complex 90 degree opening in a high-end residential project, they have a system to meet your unique circumstances.

For further information, please contact Sam Ater, VP of Sales, at 1.800.426.7113 or visit their website at doorsinmotion.net. Animations, CAD files, and videos are available.
